**TECHNICAL DATA SHEET**

# LEATHERCARE

LEATHERCARE is water borne fluoro modified nano-particles when applied provides hydrophobic as well as oleophobic layer of protection on all natural and synthetic/artificial leather without affecting its original feel and appearance. It repels water, stains, mud marks, hence keeps coated leather articles clean and dry for any accidental spillages and also it keeps leather free from microbial growth

---

**Features, benefits and areas of application**

- + Protect Leather from accidental spillage of water, coffee, tea, beverages, etc.
- + Does not affect the feel and appearance of original leather
- + Substrate remains vapor permeable/breathable
- + Can be applied on Leather articles like shoes, walets, furniture upholstery etc.
- + Suitable for artificial leathers

---

**Product specs**

**Coverage:** 40-60 sq.ft/ltr (subject to application and substrate)

**Packing:** 750ml, 20 & 200 ltr

**Shelf life:** 12 months from date of manufacturing

---

**Method of application**

- + Shake well before spray
- + Spray uniformly on Leather
- + Can also be applied by dipping or padding method too
- + Dry with hot air blower for minimum 15 mins or can cured in air circulating oven for 10-15 minutes  
(Depends on the leather sustainable temperature)
